EDUCATION

Course Name	Institute Name	University Name	Year of Passing	Score Details (%/CGPA)	Course Type
B.Tech – Computer Science & Engineering	Vellore Institute of Technology – AP	VIT-AP University	2027 (Expected)	8.04 CGPA	Full-time
12th (Senior Secondary)	Army Public School, Kaluchak	CBSE	2023	79.6%	Full-time
10th (Secondary School)	Army Public School, Kaluchak	CBSE	2021	93.6%	Full-time

PROJECTS UNDERTAKEN

Employee Management System

React.js • Node.js • Express.js • MongoDB • JWT

- Developed a full-stack employee management web application with a React.js frontend and a Node.js/Express.js REST API backend.
- Implemented complete CRUD functionality for employee records, departments, and roles, backed by a normalized MongoDB schema linking employees, departments, and salary data.
- Added authentication and role-based access control (Admin vs. Employee) using JWT for secure session management.
- Built REST endpoints to handle employee onboarding, department assignment, and salary updates.

Online Library Management System

Java • OOP • MySQL

- Built a Java-based library management system to handle book inventory, issue/return tracking, and member records.
- Applied OOP principles (Inheritance, Polymorphism, Encapsulation) to design core classes such as Book, Member, and Librarian.
- Used HashMap and ArrayList data structures to search, sort, and filter books efficiently by author, genre, and availability.
- Implemented fine-calculation logic for overdue returns using Java's date-time libraries, with data persisted in a MySQL database.

IT Service Request & Ticketing System

React.js • Node.js • Express.js • MongoDB • JWT

- Designed and built an enterprise-style IT helpdesk platform where employees can raise, track, and resolve IT support tickets – modeled on the ticket/SLA workflows used in IT service management.
- Implemented role-based access (Admin, IT Agent, Employee) with ticket assignment, status tracking, and priority queues.
- Built SLA-based escalation logic and automated status notifications to reduce average ticket resolution time.
- Created an analytics dashboard summarizing ticket volume, resolution time, and agent performance for operational visibility.

STRONG SUBJECTS

Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks, Software Engineering

SKILLS

Languages: Java, Python, JavaScript

Frameworks & Libraries: React.js, Node.js, Express.js

Databases: MySQL, MongoDB

Concepts: OOP, Data Structures & Algorithms, REST APIs, JWT Authentication
